

THE FUTURE HAPPENS NOW

Custom software development, prototyping and innovation

OUR SERVICES

IT solutions, architecture, analysis, development, business process
Java, Spring, Web (PHP, Javascript, Typescript), .NET, SQL, Neo4j

Innovation development

Are you looking to develop a new application? We'll help you turn your ideas into reality and take your business to the next level.

Application development

From online sales and manufacturing, to management intranets and R&D, we work according to your needs.

Project update and modernizing

Say goodbye to paper documents and Excel files. Take your business into the future with new technologies.

OUR VISION

The Audacious Projects offer IT solution architecture, application, innovation development, and support services for start-ups and companies undergoing digital transformation.

We aim to make information technologies accessible and user-friendly, enabling entrepreneurs to give free rein to their creativity, while improving the efficiency of their businesses.

Our solutions are tailor-made to meet your needs, step by step. We take care of your projects from A to Z, including :

- Work estimates and drafting of specifications
- Analysis and development of ideas
- IT-supported business process development
- Cloud server registration and management
- Technical analysis and mock-up creation
- Application development
- Data migration and synchronization between your systems
- On-line deployment and updates
- Long-term maintenance and data security
- Automation of repetitive processes and generation of customized reports
- Documentation and training in the use of developed systems

We develop our systems using cutting-edge technologies that are recognized for their ability to scale from individual companies to world-class systems, which we make available thanks to our specialized development process.

OUR APPROACH

Innovation development

With The Audacious, creativity is the name of the game! If you have extraordinary ideas, a business application you'd like to create, or a specific vision for your company, we can meet with you to help you bring it to life.

We'll share our information technology expertise with you, and show you different ways of developing your IT projects. We can also suggest various avenues to explore in terms of your business processes.

We believe that technology should be at the service of people, and we work to simplify and make pleasant your business operations as much as possible.

Application development

We use Agile development methodologies to ensure we meet your needs at all times.

We carry out development in phases generally ranging from 50 to 500 hours, depending on your priorities. A phase is designed to be complete in itself, while providing a solid foundation for extending functionality when desired.

Each development phase is divided into "sprints" of 2 to 4 weeks, during which we make all progress available to you on one of our test servers, so that you can test and validate the features as you go along.

Once the functionalities have been validated, we transfer the updates to a dedicated server reserved for you. This way, you stay in control of your project's progress at all times.

Project update and modernizing

We integrate gradually into existing projects, thanks to our cutting-edge « plug-and-play » approach.

We help you bring your business up to date by replacing your paper forms and Excel documents with customized management modules and secure online databases. So you can access your data at any time, without worrying about document management conflicts.

If you already have a management intranet, or are using other applications, we can connect our management modules and synchronize your data, giving you new functionalities at your disposal and increasing your efficiency seamlessly.

Day by day

To facilitate the management and regular monitoring of your projects, we offer the following services :

- A wide choice of pre-designed visual themes with optional custom graphics
- Mini-time banks to meet with impromptu requests
- Simple, accessible project management tools

If you're a start-up, micro-business or non-profit organization, you may also be eligible for our SME Discount.
